

SheSecure

Internal Women Safety, Wellness & Support Platform

PROJECT OVERVIEW

SheSecure is an internal enterprise application designed to support women employees through safety monitoring, wellness management, confidential complaint handling, emergency escalation workflows, and organizational support systems.

The platform centralizes multiple employee support workflows into a single secure application to improve workplace safety visibility, employee well-being, and operational responsiveness.

The application will be implemented using a lightweight microservices-based architecture to ensure modularity, scalability, and enterprise-level design practices while keeping the implementation practical for a POC.

KEY BUSINESS OBJECTIVES

- Improve women employee safety support
- Enable confidential complaint & POSH workflows
- Provide wellness & burnout monitoring
- Support wellness-based WFH workflows
- Improve emergency escalation handling
- Centralize employee support operations

- Provide analytics & operational dashboards
- Demonstrate enterprise microservices architecture

CORE MODULES

1. Authentication & Authorization

- Secure login/logout
- JWT-based authentication
- Role-based access control

Roles

- Employee
- Manager
- HR/POSH
- Security Team
- Admin

2. Daily Safety Check-In

- Daily “Reached Home Safely” acknowledgement
- Reminder notifications
- Escalation workflow for missed check-ins
- Manager/Security alert workflow

3. Emergency SOS Management

- One-click SOS alerts
- Emergency incident tracking
- Security notification workflow
- Alert monitoring dashboard

4. Complaint & POSH Management

- Raise complaints
- Anonymous complaint option
- Evidence upload
- Complaint tracking
- Investigation & resolution workflow

5. Wellness-Based WFH Workflow

- Wellness-based WFH requests
- Approval/rejection workflow
- Privacy-protected requests
- Request tracking

6. Wellness & Mood Tracking

- Daily mood logging
- Stress tracking

- Wellness analytics
- Burnout indicator logic

7. Notifications & Escalation

- In-app notifications
- Reminder alerts
- Escalation notifications
- Complaint/WFH status updates

8. Dashboards & Analytics

- Employee dashboard
- Manager dashboard
- HR/POSH dashboard
- Security dashboard
- Complaint analytics
- Wellness trends
- Escalation reports

ARCHITECTURE

Architecture Style

Lightweight Microservices Architecture

The application will use independently structured services with centralized API routing and authentication.

The focus is on modularity and service separation while keeping deployment manageable for the POC.

PLANNED MICROSERVICES

1. Authentication Service

Handles:

- Login/logout
- JWT token generation
- User authentication
- Role management

2. Safety & Wellness Service

Handles:

- Daily safety check-ins
- Wellness tracking
- WFH workflows
- Escalation handling

3. Complaint Management Service

Handles:

- Complaint workflows

- POSH management
- Evidence upload
- Complaint tracking

4. Notification Service

Handles:

- Notifications
- Reminder alerts
- Escalation notifications
- Approval updates

5. Dashboard & Analytics Service

Handles:

- Dashboard aggregation
- Reporting
- Analytics processing

APPLICATION FLOW

Frontend UI

API Gateway

Microservices Layer

Business Logic Layer

SQL Server Database

FRONTEND TECH STACK

- ASP.NET MVC
- Razor Views
- Bootstrap 5
- JavaScript/jQuery
- Chart.js

BACKEND TECH STACK

- ASP.NET Core Web API
- Entity Framework Core
- SQL Server
- ASP.NET Identity
- JWT Authentication
- LINQ
- Repository Pattern

Optional:

- SignalR → real-time notifications
- Hangfire → scheduled jobs/reminders

DATABASE MODULES

- Users & Roles
- DailySafetyCheckIns
- Complaints
- ComplaintFiles
- WFHRequests
- WellnessLogs
- EmergencyAlerts
- Notifications
- AuditLogs

SECURITY IMPLEMENTATION

Authentication

- JWT-based authentication
- Secure password hashing

Authorization

- Role-based access control
- Endpoint-level authorization

HIGH LEVEL API MODULES

Auth APIs

- Login
- Register
- Logout

Safety APIs

- Daily check-in
- Acknowledge safety status
- Escalation handling

Complaint APIs

- Create complaint
- Upload evidence
- Update complaint status

Wellness APIs

- WFH requests
- Mood/stress logging
- Wellness analytics

Emergency APIs

- SOS alert creation
- Incident tracking

Notification APIs

- Notifications
- Reminder updates

Dashboard APIs

- Employee dashboard
- HR dashboard
- Analytics reports

IMPLEMENTATION PHASES

Phase 1 – Foundation Setup

- Solution setup
- API Gateway setup
- Authentication service
- Database schema design
- Role management

Phase 2 – Core Modules

- Complaint management
- Daily safety check-ins
- Wellness/WFH workflows
- Wellness tracking

Phase 3 – Notifications & Emergency

- Notification service
- Escalation workflows

- SOS management

Phase 4 – Dashboards & Analytics

- Dashboard UI
- Analytics reports
- Charts & KPI cards
